ELEMENTAL MACHINES

Take Control With Intelligent Lab Asset Management

Optimize Performance. Strengthen Compliance. Prepare for What's Next.

Modern labs are not only more complex than ever, they are increasingly cost-conscious. To get the most out of every asset, your team needs more than a spreadsheet and good intentions. You need total visibility across your equipment, your workflows, and your infrastructure.

That's the promise of full-spectrum lab asset management. By consolidating key information, such as equipment details, maintenance records, SOPs, and locations, you can reduce downtime, boost efficiency, and protect compliance. Our asset management tools are evolving quickly, and you can tap into these core features today:

Visualize and locate assets in real time with customizable floorplans

View utilization insights and equipment health scores to support more effective purchasing and service decisions

Sync dashboards and calendars for streamlined task scheduling

Access NIST-traceable calibration records and environmental monitoring data

Integrate with your existing systems (LIMS, ELNs, or asset platforms) for a more connected lab ecosystem

Even More to Come

Elemental Machines is continuously building solutions to help labs manage and monitor every asset, regardless of the make, model, or manufacturer. That includes exploring more advanced tools for digital asset tracking, maintenance scheduling, and cross-site lab visibility.

The result?
More control, superior oversight, optimized efficiency — *the ability to do more with what you already have.*

Why It Matters Now

Inefficiencies and downtime can cost organizations 20-30% of annual revenue. With budgets tightening across the industry, the ability to **do more with what you have** has never been more essential.

Let's make sure every asset is accounted for — and that it's working as hard as you are.
